SPECIFIC PRECAUTIONS - GENERAL GUIDELINES

Dimming not allowed

Lamp suitable for dimming only with specific dimmers
(A list of compatible dimmers shall be provided on the website www.megaman.cc)

Lamp not suitable for use if broken
(its outer case)

Lamp not suitable for use under dust and moisture

Indoor use only

Turn off the lamp and let it cool down before any replacement

Do not run LED and incandescent lights on a trailer

For lamps with a weight significantly higher than that of the lamps for which they are a replacement, attention should be drawn to the fact that the increased weight may reduce the mechanical stability of certain luminaires and lamp holders and may impair contact making and lamp retention.

TESTING CONDITIONS

Refer to Annex A of IEC 62612 method of measuring lamp characteristics

Light output and life hour are measured at 25°C, 230V

CALCULATIONS - GENERAL RULES

Refer to Annex II of Energy Labelling (EU) 2019/2015

Energy efficiency classes and calculation method

The energy efficiency class of light sources shall be determined as set out in Table 1, on the basis of the total mains efficacy η_{TM}, which is calculated by dividing the declared useful luminous flux Φ_{use} (expressed in *lm*) by the declared on-mode power consumption P_{on} (expressed in *W*) and multiplying by the applicable factor FTM of Table 2, as follows:

$$\eta TM = (\Phi use/Pon) \times FTM\ (lm/W)$$

Table 1

Energy efficiency classes of light sources

Energy efficiency class	Total mains efficacy ηTM (lm/W)
A	210 ≤ ηTM
B	185 ≤ ηTM < 210
C	160 ≤ ηTM < 185
D	135 ≤ ηTM < 160
E	110 ≤ ηTM < 135
F	85 ≤ ηTM < 110
G	ηTM < 85

Table 2

Factors FTM by light source type

Light source type	Factor FTM
Non-directional (NDLS) operating on mains (MLS)	1,000
Non-directional (NDLS) not operating on mains (NMLS)	0,926
Directional (DLS) operating on mains (MLS)	1,176
Directional (DLS) not operating on mains (NMLS)	1,089
